52:   //More info in higher classes
53:   return 0;
54: }
55:
```

ARRAY1.CPP output

```
01: How many numbers would you like: 10
02: Enter the numbers:
03: 1
04: 2
05: 3
06: 4
07: 5
08: 6
09: 7
10: 8
11: 9
12: 10
13:
14: The average is: 5
15:
16: The numbers greater than average are:
17: 6
18: 7
19: 8
20: 9
21: 10
22:
23:
```

FACTORIAL.CPP source

```
01: /*
02:  * Write a program to find the factorial
03:  * of a number using a user defined function
04:  * and recursion
05:  */
06:
07: #include <iostream>
08: using namespace std;
09:
10: /* this is the recursive factorial function
11:  * which repeatedly calls itself
12:  * until n is not greater than 1
13:  */
14: int factorial(int n) {
15:   if(n>1) return n*factorial(n-1);
16:   else return n;
17: }
18:
19: int main() {
20:
21:   int num;
22:
23:   cout<<"Enter the number to find factorial:";
24:   cin>>num;
25:
26:   int fact=factorial(num);
27:
28:   cout<<num<<"! = "<<fact<<endl;
29:
30:   //Tell OS everything's OK
31:   return 0;
32: }
33:
34:
35:
36:
```

FACTORIAL.CPP output

```
1: Enter the number to find factorial:5
2: 5! = 120
3:
```

LINEAR-SEARCH1.CPP source

```
01: /*
02:  * Program to read the admission numbers of N
03:  * students in a class and search given admission
04:  * no. from the list using linear search
05:  */
06:
07: #include<iostream>
08: using namespace std;
09:
10: int main() {
11:
12:   int adm_nos[100];

41:     cout<<to_search<<" was not found"<<endl;
42:
43:   return 0;
44: }
45:
46:
```

LINEAR-SEARCH1.CPP output

```
01: Enter the number of students:10
02: Enter admission numbers:
03: [0]:101
04: [1]:102
05: [2]:103
06: [3]:104
07: [4]:105
08: [5]:106
09: [6]:107
10: [7]:108
11: [8]:109
12: [9]:110
13:
14: Enter the admission no. to search:108
15: Found 108 at index 7
16:
```

POINTER1.CPP source

```
01: /*
02:  * Program to create two pointers initialised with
03:  * two numbers and find their average.
04:  */
05:
06: #include <iostream>
07: using namespace std;
08:
09: int main() {
10:   int* m = new int(24);

19:
20:   return 0;
21:
22: }
23:
24:
```

POINTER1.CPP output

```
1: value of m:24
2: value of n:32
3: average:28
4:
```

STRING-LENGTH.CPP source

```
01: /*
02:  * Program to find string length without
03:  * using strlen function
04:  */
05:
06: #include <iostream>
07: using namespace std;
08:
09: int main() {
10:
11:   char str[100];
12:   int length = 0;
13:
14:   cout<<"Enter the string: ";
15:   cin>>str;
16:
17:   // Example string="Hello" = {'H','e','l','l','o','\0'}
18:   // length is initially zero
19:   // str[0] = 'H' != '\0'; so length+=1 and continue loop
20:   // ...
21:   // str[5] = '\0' == '\0' stop looping
22:   // print 5
23:   while(str[length]!='\0') {
24:    length++;
25:   }
26:   cout<<"The length of given string: "<<length<<endl;
27:   return 0;
28: }
29:
30:
```

STRING-LENGTH.CPP output

```
1: Enter the string: Hello
2: The length of given string: 5
3:
```

STRUCT1.CPP source

```
01:
02: /*
03:  * Program to find the net salary of an employee
04:  * by defining a struct with the details:
05:  *  employee code,name,basic pay,DA,HRA,PF.
06:  */
07:
08: #include <iostream>
09: using namespace std;
10:
11: struct employee {
12:   int emp_code;

17:   int pf;
18:   int net_salary;
19: };
20:
21: int main() {
22:   employee emp;
23:
24:   cout<<"Enter the details of the employee:"<<endl;
25:   cout<<"\tEmployee code:";
26:   cin>>emp.emp_code;
27:   cout<<"\tName:";
28:   cin>>emp.name;
29:   cout<<"\tBasic Pay:";
30:   cin>>emp.basic_pay;
31:   cout<<"\tDA:";
32:   cin>>emp.da;
33:   cout<<"\tHRA:";
34:   cin>>emp.hra;
35:   cout<<"\tPF:";
36:   cin>>emp.pf;
37:
38:   emp.net_salary = (emp.basic_pay + emp.da + emp.hra) - emp.pf;
39:
40:   cout<<"Net salary:"<<emp.net_salary<<endl;
41:   return 0;
42: }
43:
44:
```

STRUCT1.CPP output

```
1: Enter the details of the employee:
2:          Employee code:123
3:          Name:Hercules
4:          Basic Pay:10000
5:          DA:1000
6:          HRA:1000
7:          PF:600
8: Net salary:11400
9:
```

SUM-OF-DIGITS.CPP source

```
01:
02: /* Program to input a number and find the sum of its digits */
03:
04: #include<iostream>
05: using namespace std;
06:
07: int main() {
08:
09:   int number, sum_of_digits=0;
10:
11:   cout<<"Enter a number:";
12:   cin>>number;
13:
14:   // The content of the loop will be
15:   // executed as long as number > 0
16:   while(number>0) {
17:     //add the 1's digit of the number to sum_of_digits
18:     //trick: division by 10 and take reminder gives 1's digit
19:     sum_of_digits+=number%10;
20:     //divide number by 10 (ignore decimals. ie integer division)
21:     //so the 10's place will become 1's place
22:     //100's place -> 10's place and so on.
23:     number/=10;
24:   }
25:
26:   cout<<"Sum of digits:"<<sum_of_digits<<endl;
27:
28:   return 0;
29: }
30:
31:
```

SUM-OF-DIGITS.CPP output

```
1: Enter a number:1234
2: Sum of digits:10
3:
```

SUM-OF-SQUARES.CPP source

```
01: /*
02:  * Program to display the sum of squares of N natural numbers
03:  * without using equations
04:  */
05:
06: #include <iostream>
