SWITCH-CASE1.CPP source

```
* Program to input a group code and
* output corresponding group name based
* on the following:
* | Code no. | Subject
* |-----
* | 5 | computer science
* | 33 | computer application |
* | 39 | science
* | other | invalid option
#include<iostream>
using namespace std;
int main() {
 int group_code;
 cout<<"Enter the group code:";</pre>
 cin>>group_code;
 cout<<"Group name:";</pre>
 switch(group_code) {
  case 5:
   cout<<"Computer Science";</pre>
   break;
  case 33:
   cout<<"Computer Application";</pre>
   break;
  case 39:
   cout<<"Science";</pre>
   break;
  default:
   cout<<"Invalid Option";</pre>
 cout<<endl;
 return 0;
```

SWITCH-CASE1.CPP output

Enter the group code:33
Group name:Computer Application
